WE can ALL do this!!!
Mid-America Vascular Study Group (MAVSG)

April 14, 2021
9 am-12 pm CT
Remote
Co-Medical Leaders:

Dr. David Chew MD and  
dchew@iowaheart.com  
Dr. James Ebaugh MD  
jebaugh@iowaheart.com  
Arterial Quality Committee

Dr. Trissa Babrowski MD  
Trissa.Babrowski@uchospitals.edu  
Venous Quality Committee

Dr. Ravishankar Hasanadka MD  
Ravishankar.Hasanadka@osfhealthcare.org  
Regional Data Coordinator

Cynthia A Bik BSN RN  
cbik@iowaheart.com
Meeting Attendance Credit

Before we get started, please sign in.

1. Click “Participants” in the box at the top or bottom of your screen.
2. If your full name is not listed, hover next to your name and you’ll see “rename”.
3. Click and sign in.

If you can’t sign in, please email Leka Johnson at ljohnson@svspso.org and let her know the identifier you were signed in under (ex –LM7832 or your phone number).

**SPECIAL NOTE: We do give credit to residents/fellows that don’t have a PATHWAYS user account !!!

Sign in with your Full name, MD, Name of Institution

VQI Regional Quality Report

Spring 2021

This report is patient safety work product generated within the SVS PSO, LLC, and is considered privileged and confidential.

About the Report

The VQI Regional Quality Report is produced semiannually to provide centers and regions targeted, comparative results and benchmarks for a variety of procedures, process measures, and postoperative outcomes. The report is organized into separate reports that can be quickly accessed by clicking on the report names in the table of contents on the left.

For drill-down and data feedback on your center’s cases, click on “VQI Case Appendix” in the table of contents on the left.
Important Notes

- All results are based on data entered into the VQI as of January 31, 2021. Any subsequent changes or updates to data after that date will not be reflected in this report.

- Procedure timeframes and inclusion/exclusion criteria are given at the top of each report. Cases are also excluded if outcomes are missing or not enough data was entered to determine whether the case met inclusion/exclusion criteria.

- Regions must have at least 3 centers with included cases for regional results to be displayed in tables and line charts.

- Regions must have at least 3 centers with at least 10 included cases per center for regional results to be displayed in bar charts. It is therefore possible for a region’s results to be displayed in tables and line charts, but not in bar charts.

- For risk-adjusted reports, regions must have at least 3 centers with at least 10 complete cases per center for regional results to be displayed in bar charts. It is therefore possible for a region’s results to be displayed in tables and line charts, but not in bar charts.

- In all graphics, "*" indicates a p-value <.05.
Dashboard

The dashboard provides a high-level summarization of your center’s results for each of 25 reports, and gives both regional and VQI-wide benchmarks for comparison. The “Your Center” column gives the percentage of your center’s cases with the noted outcome. Numbers in parentheses give the number of cases with the outcome and the total number of cases meeting the inclusion criteria for that report. The “Your Region” and “VQI Overall” columns give the overall, aggregate percentage of cases with the noted outcome, as well as the 25th, 50th (median), and 75th percentiles, for centers in your region and VQI, respectively ([25th|50th|75th]). Your center’s results are highlighted blue if your center is in the “best” 25th percentile for VQI Overall, and coral if your center is in the “worst” 25th percentile for VQI Overall.

For details on a particular report, click on the report name in the table of contents on the left.

Legend: Blue = “Best” 25th percentile  Coral = “Worst” 25th percentile

Note that procedure volume results are not highlighted

Dashboard Highlights

• Embedded drill-down and data feedback

VQI Case Appendix

Winter 2020

About the Appendix

The VQI Case Appendix provides embedded data feedback and drill-down for each dashboard report. Using the appendix, centers can easily identify and download cases that were reviewed or excluded from each report, as well as cases with each noted outcome.

The interactive tables below give your center’s cases (both reviewed and excluded) entered for the procedure timeframe of each report (as of 11/30/2020). Each row references a particular case and each case is referenced by a PRIMPROCID, a unique case identifier assigned to each procedure to protect patient identity. Additional data elements are included for each case to further facilitate quality improvement efforts, including procedure and patient characteristics, length-of-stay (LOS) data, discharge medication data, complication data, and other data elements related to dashboard report construction.

To download a .csv or .xlsx file containing your center’s data, click on either the “CSV” or “Excel” buttons located above each interactive table.

Discharge Medications

Procedures performed between January 1 and December 31, 2020

Includes CAS (TFEM CAS and TCAR), CEA, EVAR, INFRA, LEAMP, OAAA, PVI, SUPRA, and TEVAR procedures only. Antiplatelet is defined as ASA or P2Y12 inhibitor. Cases are excluded if (1) Discharge Statin = “No, for medical reason” OR (2) Both Discharge ASA = “No, for medical reason” AND Discharge P2Y12 inhibitor = “No, for medical reason” OR (3) An in-hospital death occurred.

The table below gives the number of procedures meeting the inclusion criteria, and the percentage of those procedures where patients received discharge medications.

Discharge Antiplatelet+Statin by Region Across VQI (Jan-Dec 2020)

Regions (regions with <3 centers with at least 10 cases not shown)

"Others" indicates centers that do not belong to a regional group.

*** Indicates region's rate differs significantly from the VQI rate.
TFEM CAS ASYMP: Stroke/Death

Procedures performed between January 1 and December 31, 2020

Includes asymptomatic admissions for Transfemoral Carotid Artery Stenting (TFEM CAS) only. Asymptomatic admissions are admissions where the patient had no ipsilateral or contralateral retinal or cortical TIA or stroke within 180 days prior to surgery. Excludes any patient with prior vertebrobasilar TIA or stroke, prior ipsilateral CAS, CAS for intracranial treatment, or any procedure involving dissection, trauma, FMD, or “Other” lesion types. Procedures with an approach other than “Femoral” are also excluded.

The table below gives the number of TFEM CAS procedures (performed on asymptomatic admissions) meeting the inclusion criteria, and the observed and expected rates of in-hospital stroke or death for those cases.

<table>
<thead>
<tr>
<th></th>
<th>Your Center</th>
<th>Your Region</th>

</tr>
</tbody>
</table>

*“Expected rate” is the rate estimated by a statistical model that accounts for patient characteristics, including age, gender, race, BMI, comorbidities, medication and stroke and vascular history. “Cases with complete data” include patients who have data on all of those factors.
Stroke or Death after TFEM CAS for Asymptomatic Admissions by Year

Rates shown are observed rates among cases meeting inclusion criteria.
TFEM CAS SYMP: Stroke/Death

Procedures performed between January 1 and December 31, 2020

Includes symptomatic admissions for Transfemoral Carotid Artery Stenting (TFEM CAS) only. Symptomatic admissions are admissions where the patient had an ipsilateral or contralateral retinal or cortical TIA or stroke within 180 days prior to surgery. Excludes any patient with prior vertebrobasilar TIA or stroke, prior ipsilateral CAS, CAS for intracranial treatment, or any procedure involving dissection, trauma, FMD, or “Other” lesion types. Procedures with an approach other than “Femoral” are also excluded.

The table below gives the number of TFEM CAS procedures (performed on symptomatic admissions) meeting the inclusion criteria, and the observed and expected rates of in-hospital stroke or death for those cases.

<table>
<thead>

*“Expected rate” is the rate estimated by a statistical model that accounts for patient characteristics, including age, gender, race, BMI, comorbidities, medication and stroke and vascular history. “Cases with complete data” include patients who have data on all of those factors.
Stroke or Death after TFEM CAS for Symptomatic Admissions by Year

Rates shown are observed rates among cases meeting inclusion criteria.
TCAR ASYMP: Stroke/Death

Procedures performed between January 1 and December 31, 2020

Includes asymptomatic admissions for TransCarotid Artery Revascularization (TCAR) only. Asymptomatic admissions are admissions where the patient had no ipsilateral or contralateral retinal or cortical TIA or stroke within 180 days prior to surgery. Excludes any patient with prior vertebrobasilar TIA or stroke, prior ipsilateral CAS, CAS for intracranial treatment, or any procedure involving dissection, trauma, FMD, or “Other” lesion types.

*** Indicates region’s rate differs significantly from the VQI rate.
National Quality Initiative – EVAR Sac Diameter Report

• Wide Variation in Compliance – VQI Mean 58.6% (22-89%)
• Little improvement since inception in 2016

“It is the obligation of the operating surgeon to stress the need for lifelong surveillance and integrate discussions about LTFU into all stages of AAA EVAR care to ensure that their patients achieve optimal outcomes.” – Salvatore Scali, MD, Professor of Surgery, University of Florida.

Barriers to Reporting

• No LTFU; patient lost to evaluation
• Patient Factors
  ▪ No Need, “Feeling Well”
  ▪ Unaware of importance of LTFU and imaging
  ▪ Moved/phone disconnected
  ▪ Lost insurance
  ▪ Too far to travel/inconvenient parking
Moving The Needle

Other Barriers

• Dictated Patient Visit with “AAA sac unchanged” or “No endoleak or size increase”
• Imaging not available at time of visit
• Center not wanting to use Radiology report information

Discussion

Suggestions for improvement:

➢ Center unblinding at Regional meetings ➡ Peer competition
➢ Biannual Physician Report sent with PRIMPROCID information
➢ GC Update Report from each Regional Medical Director to maintain awareness
➢ “Best Practice” Webinar made available for low performing centers
➢ Make Sac Diameter size notation at every patient encounter
EVAR: SVS Sac Size Guideline

Procedures performed between January 1 and December 31, 2020

Includes Endovascular AAA Repair (EVAR) procedures only. Excludes any non-elective procedure. SVS sac size guideline is ≥5 cm for Women and ≥5.5cm for men. If the patient has any iliac aneurysm, the guideline is considered met regardless of AAA diameter.

The table below gives the number of EVAR procedures meeting the inclusion criteria, and the percentage of those procedures meeting the SVS sac size guideline.

ABI/Toe Pressure Assessment before PVI for Claudication by Region Across VQI (Jan-Dec 2020)

Regions (regions with <3 centers with at least 10 cases not shown)

**Indicates region's rate differs significantly from the VQI rate.**
INFRA CLTI: Major Complications

Procedures performed between January 1 and December 31, 2020

Includes Infracutaneous Bypass (INFRA) procedures for rest pain, tissue loss, or acute ischemia. Major complications are defined as in-hospital death, ipsilateral BK or AK amputation, or graft occlusion.

The table below gives the number of INFRA procedures meeting the inclusion criteria, and the percentage of those procedures that resulted in in-hospital death, ipsilateral BK or AK amputation, or graft occlusion.

# SUPRA CLTI: Major Complications

Procedures performed between January 1 and December 31, 2020

Includes Suprainguinal Bypass (SUPRA) procedures for rest pain, tissue loss, or acute ischemia. Major complications are defined as in-hospital death, ipsilateral BK or AK amputation, or graft occlusion.

The table below gives the number of SUPRA procedures meeting the inclusion criteria, and the percentage of those procedures that resulted in in-hospital death, ipsilateral BK or AK amputation, or graft occlusion.

LEAMP: Postop Complications

Procedures performed between January 1 and December 31, 2020

Includes Lower-Extremity Amputation (LEAMP) procedures only. Postoperative complications are defined as myocardial infarction, dysrhythmia, congestive heart failure, surgical site infection, renal complication, or respiratory complication.

The table below gives the number of LEAMP procedures meeting the inclusion criteria, and the percentage of those procedures that resulted in a postoperative complication.

HDA: Primary AVF vs. Graft

Procedures performed between January 1 and December 31, 2020
Includes Hemodialysis Access (HDA) procedures only. Excludes procedures where Access Type = Endo AVF or patients with a previous access procedure in the same arm.

The table below gives the number of HDA procedures meeting the inclusion criteria, and the percentage of those procedures that were primary AVF.

Centers (centers with <10 cases not shown)
**IVCF: Filter Retrieval Reporting**

Procedures performed between January 1 and December 31, 2018

Includes Inferior Vena Cava Filter (IVCF) procedures only. Excludes filters with permanent planned duration, patients who have died since discharge, or patients where no follow-up was possible.

The table below gives the number of procedures meeting the inclusion criteria, and the percentage of those procedures in which the filter was reported as retrieved (or retrieval was attempted) at any time post-procedure. Because follow-up is critical for assessing filter retrieval, cases meeting the inclusion criteria are broken down into those with follow-up records (at least 1 follow-up record) and those without follow-up records.

End of Regional Data Review
Hi Cynthia,

Is there a way to submit a question for the regional meeting? Our physicians and abstractors would like clarification on the hematoma complication and want to know how other sites are reporting this. The definitions sound like any hematoma should be documented, but that “some define it as larger than golf ball”. Obviously, this is a huge discrepancy between a 1cm and a golf ball.

Thanks for your help.

Sarah Lear, BSN RN PCCN-K
Quality Outcomes Coordinator, Quality and Safety
The University of Kansas Health System
Phone 913-588-0149 | Fax 913-588-2869 | slear@kumc.edu
4000 Cambridge Street (G015 Delp), Mailstop 2018 Kansas City, KS 66160
Here is the answer I got back

Response to your question:

Historically we have advised users to capture as a minor hematoma if it is a visible hematoma that requires manual or mechanical assist compression for greater than 10 minutes or admission for observation would then be captured as a hematoma.

If it does not require compression or admission for observation it is not captured as minor hematoma.

Select Options and associated help text:
0 = No,
1 = Minor,
2 = Transfusion,
3 = Thrombin injection,
4 = Surgical Rx

"No = No hematoma observed during the procedure or in the observation period before discharge after the procedure (note that complications following discharge are entered on a follow-up form).

Minor = Visible hematoma (some define it as larger than golf ball) that did not require transfusion, thrombin injection, interventional or surgical treatment, but may have require manual or mechanical assist compression for greater than 10 minutes or admission for observation.

Transfusion = Required to treat blood loss associated with hematoma.
Thrombin injection = Invasive procedure in which thrombin is injected into hematoma (usually pseudoaneurysm) to promote clotting and resolution.
Interventional = Hematoma Interventional treatment with PTA tamponade, stent and/or stent graft
Surgical treatment = Open surgery required to evacuate or treat hematoma."
“The Effect of Abdominal Aortic Aneurysm Size on Endoleak, Secondary Intervention and Survival following EVAR”

Abstract

Objective:

The purpose of this study was to identify the effect of abdominal aortic aneurysm (AAA) size on endoleak development and secondary intervention after endovascular repair (EVAR), as well as to examine the effect on overall survival and cause of mortality.

- VQI wants to help medical students, residents and fellows learn about quality improvement
Trainee engagement:

- Plans –
  - Invite students and trainees to regional and national meetings
  - Engage students and trainees in quality improvement projects
  - Participate in presentations and publications
  - VQI intern program (in development)
Trainee engagement:

- What are your ideas?
VQI Members call for volunteers early 2021:

• 19 Applicants

• VQI Representatives
  – Dr. Leila Mureebe – Chair
  – Dr. Carla Moreiro – Vice-Chair
  – Dr. Samantha Minc
  – Dr. Patricia Fernandez
  – Dr. Mina Boutros
  – Dr. Rafael Malgor
Update on PSO Diversity Committee

• Awaiting appointments from
  ➢ SVS DEI Committee
  ➢ AVF
  ➢ ACC

• Broad representation
  ➢ Years in practice
  ➢ Region
  ➢ Gender
  ➢ Race
FDA Safety Notifications

• As a Patient Safety Organization, we feel compelled to share Safety Notifications with VQI Members
• FDA will contact the SVS PSO with Safety Notifications it wants us to communicate
• Safety Notifications will appear in both the PSO and SVS newsletters
• All Safety Notifications are posted to the VQI and SVS Websites

https://www.vqi.org/resources/fda-communication/
The 2021 VQI Annual Meeting has been moved to August!

Important Dates and Times for the 2021 VQI Annual Meeting at VAM

August 17, 2021 12PM – 6:30PM* Pacific Time
August 18, 2021 8AM – 5PM Pacific Time
*Poster Presentation and Networking Reception – Tuesday, August 17th at 5:00PM to 6:30PM

We are hopeful that we will be able to have an in-person meeting at the San Diego Convention Center. In the event we are unable to meet live, we will transition to on-line presentation.
Partners and Endorsing Organizations

SVS | VQI

In collaboration with NCDR®

American Venous Forum

Society for Vascular Medicine

Access Excellence

Vascular Access Society of the Americas

American Heart Association®
Now Is The Time

- ACC and SVS began 2021 with a united vascular registry - creating a single resource focused on improving care and outcomes of patients with vascular disease.

- ACC PVI registry participants who have not yet joined the SVS VQI, may contact the SVS VQI account team by emailing vqi@m2s.com, or by calling 603-298-6717, to begin enrollment.
Ongoing Collaboration

• ACC NCDR will have **representation** on all VQI Councils and Committees
COVID-19 Update

• COVID-19 Variable insertion into registries (Sept. 2020)
• Two JVS Publications (JVS & JVSVL) on registry volumes
• AHRQ PSO Presentation on VQI Response
• International Registry submission for June issue
  *Seminars in Vascular Surgery*
• Initial Outcomes Review of COVID-19 effect in registries
• Collaboration with Vascular Surgery COVID-19 Collaborative (VASCC) on LTFU in participating centers
My Peripheral Arterial Disease: a VQI Pilot of Patient Reported Outcomes for PAD

• The Society for Vascular Surgery Vascular Quality Initiative is seeking practices to participate in My PAD, a pilot program for the collection of patient reported outcomes (PRO) on patients undergoing endovascular treatment for peripheral arterial disease (PAD).

• The VQI recognizes that traditional outcomes such as patency and reintervention may not fully capture the quality of care or the experience of PAD patients. There is a long overdue need to learn and measure the patient’s perspective.

• **Must be in the PVI registry and have greater than 70% follow up! Not too late to join the Pilot!!**
Highlights

• Outpatient peripheral vascular interventions (PVI) for claudication or chronic limb threatening ischemia
• Collect VascuQoL-6 and EuroQoL 5D-5L (estimated completion time 10-15 minutes)
• Collection at three time points: pre-procedure, one month and one year postoperatively
• PRO data entry options include paper forms, computer, tablet and smart phone
• Educational materials for direct from patient data entry
• PRO feedback to participating physicians
Reporting Highlights and Questions:

- New On-line Follow-up reports
  - EVAR Released - Jan 2021
  - CEA/CAS/PVI/TEVAR – To Be Released in 2021

- New Dashboard and Regional Report Drilldown

- Suggestions for “other” reports
CME/CE CREDIT FOR REGIONAL MEETINGS

</tbody>
</table>
Please describe any 'pearls' or takeaway messages:

- Identifying our areas of concern by comparison to others in our region and nationally is helpful toward setting priorities.
- Other facilities are experiencing the same difficulties I am with data abstraction.
- Excellent Meeting.
- Good collaboration and networking with peers.
- How important it is for my facility, not just the doctors, to have this information from the registry.
- By sharing the report with benchmarks, our organization will identify quality improvements we can work on to improve patient outcomes.
- Will look into doing more patient education.
Barriers

- Lack of administrative support, Patient compliance issues
- Lack of resources/equipment
- MDs to give specific measurement in their notes
- Abstractions leave little time for QI projects
- COVID, patients traveling and receiving follow up elsewhere

How will you address these barriers?

- Look in to obtaining additional administrative organization and support
- Review operational definitions and email m2support for clarification
- Educate others at my location. Continue patient education and follow-up.
- Keep as organized as possible and enter patient information ASAP
- Work with IT to create template for follow-up office visits (to include key data points)
- Show cost savings of implementation
- Better communication with PCP
Des Moines University is the continuing education provider for this activity.

The attendance roster will be cross-referenced with those applying for CME/CE. Sign in correctly.

Each participant **MUST COMPLETE BOTH** the attendance attestation and the meeting evaluation from the URL site – one form.

You will have 7 days from the date of the meeting to complete the forms and **SUBMIT**.

Approximately 14 days from the meeting, Des Moines University will email you instructions on how to access your certificate.

PSO leadership is providing continuing education credit to you at no charge!

**If you do not complete and submit the online forms within 7 days, continuing education credit cannot be awarded.**
Meeting Attendance Credit

**REMEMBER TO PSO:**

- **P**UT your FULL NAME in RingCentral to get credit for attendance and CME/CE credit (no exceptions will be made)
- **S**END an email to ljohnson@svspso.org with names of group members that are sharing 1 device
- **O**FFICALLY apply for CME/CE credit by clicking this link: https://dmu.co1.qualtrics.com/jfe/form/SV_cO2i6jo5jD32xcq

You only have **7 days** to complete forms for CME/CE Credit. **NO EMAIL WILL BE SENT AS A REMINDER OR WITH THE CME/CE LINK**
Quality Improvement Update

Update on Charters 2020 and 2021

• Fifty-eight (58) charters submitted in 2020!
  – LTFU – 14
  – D/C Medications – 17
  – Clinical – 3
  – *Documentation – 24
• *Multi-regional AAA size compliance project – 19 charter participants. 33 overall participants.
• 2021 – Twenty charters already!
• Focused phone calls are well attended – now on a quarterly schedule (Jan, April, July, Oct).
Putting VQI Data into Action
See what your colleagues are doing with QI

• Abstracts were submitted and acceptance notifications were sent out on March 1st
• Planning on an in-person meeting in San Diego
• If needed, we will once again convert the meeting into an all-virtual format
• Incorporating some aspects of virtual online learning
• Posters that were accepted for 2020 were automatically accepted into the 2021 poster session without the need to resubmit
Charters

- Charter participants become part of focused group calls
  - Interactive discussion sharing barriers and successes
  - Sharing of charters
  - Networking
  - Checking in – where are you in the process
  - Celebrating success

One on one calls, if requested
National QI project details

- Submit Project Charters and supporting documentation for presentations and posters to QI@SVSPSO.ORG or cjackson@svspso.org.

- Visit the VQI Members Only Website for sample charters, webinars, and presentations on VQI Quality Improvement Projects. www.vqi.org
2020 Participation Award Changes
MAJOR CHANGE

• Long Term Follow-Up 2018 cases
  – COVID-19 affect
  – Remove LFTU from the 2020 Participation Award – BUT...
  – Acknowledge centers that maintained, improved LTFU with a certificate
    • Centers in top 25% for 2018 LTFU rates
    • Statistically significant increase in LTFU rate from 2017 to 2018
Scoring 2020 (During COVID-19)

- Three categories scored, each on a 0-6 point scale:
  - LTFU – REMOVED. Separate recognition.
  - Meeting attendance (weighted 50%)
  - QI project involvement (weighted 40%)
  - Number of registry subscriptions (weighted 10%)

- The final score is calculated as follows:
  Total points = 5 x Attendance score + 4 x QIP score + 1 x Registry score
Participation Awards Program

- 2020 Participation Award results to be announced in this meeting.
- 3 Star recipients are presented at the in-person Annual VQI meeting
- Participation Awards began in 2016 to encourage active participation in the registries program and recognize the importance of participation.
- Participating centers can earn up to three stars based on actions that lead to better patient care – more details available at https://www.vqi.org/quality-improvement/participation-awards/
Participation Award Results 2020 - MAVSG

- MercyOne Des Moines Medical Center
- Carle Foundation Hospital
- Northwestern Memorial Hospital
- OSF Saint Francis Medical Center
- University of Chicago Medical Center
- NorthShore Hospital
- Saint Luke's Hospital of Kansas City

Congratulations!
Regional Medical Director Nominees for Fall 2021 – 3 Year Term

- Vibhab Bansal, MD – Javon Bea Hospital – Riverside Campus
- David Hasan, MD – University of Iowa Hospitals and Clinics
- Ashley Vavra, MD – Northwestern Memorial Hospital – RESULTS UPDATE: elected by regional Executive Council (EC) votes – **ACCEPTED POSITION**

Arterial RAC Nominee for Fall 2021 – 3 Year Term

- Dr Kamal Gupta – University of Kansas Hospital - RESULTS UPDATE: elected by regional Executive Council (EC) – **ACCEPTED POSITION**

**Next Steps after today’s regional meeting:**

- The vote will go to the regional EC by email
- The EC members will have three weeks to participate in the voting
- All nominees will be notified of the EC’s voting results

AQC Update: Vascular Medicine Consult Registry

The Society for Vascular Surgery Patient Safety Organization® (SVS PSO) and the Society for Vascular Medicine (SVM), in collaboration with the American Heart Association® (AHA), are excited to introduce the SVS Vascular Quality Initiative’s Vascular Medicine Consult (VMC) Registry.

This Registry will target the management of NEW Outpatient Consults who are being treated medically for:

- Atherosclerotic carotid artery occlusive disease
- Abdominal Aortic aneurysm
- Peripheral lower extremity arterial disease due to atherosclerosis or true aneurysm

The Vascular Medicine Consult Registry provides a unique opportunity to look at the natural history of a disease and what factors impact the progression. The emphasis of this Registry will be medication details and dosages, risk factor and lifestyle modifications such as exercise and diet, and non-operative treatments and counseling. The value of this Registry centers on the comparative effectiveness of surgery vs. medically managing these vascular diseases.

Learn more: The Vascular Quality Initiative | Vascular Medicine Consult Registry (New) (vqi.org)
Venous Quality Council:
Ravi Hasanadka, MD
Venous SVS PSO Organization

SVS PSO Venous Arm

**Governing Council**
4 SVS Representatives
2 AVF Representatives
18 Regional Group Representatives

**Research Advisory Council (venous RAC)**
Chair: Nicholas Osborne

**Venous Quality Council (VQC)**
Chair: Marc Passman
3 AVF + 2 SVS Representatives
18 Regional Group Representatives

**IVC Filter Committee**
Chair: Tony Gasparis

**Varicose Vein Committee**
Chair: Nick Osborne

**Venous Stent Committee**
Chair: William Marston
Three Year Goals for VQC:

- Dedicated podium time for VQI at AVF
- Update Varicose Vein and IVC quarterly interoperative dashboards
- Create Venous Stent dashboard
- Work on LTFU dashboards for all 3 venous procedures
- Continue work C2 disease and appropriateness of care
- Continue work with United Healthcare
- Create COPI (Center Opportunity for Process Improvement) reports
- Create CAPI (Clinical Appropriateness Performance Indicators) reports
**Inclusion Criteria:**

Percutaneous (closed) and/or cut-down (open) procedures to treat patients with symptomatic venous obstructions due to chronic thrombosis and/or some venous compression disorders. Vessels included: Inferior Vena Cava, Common iliac vein, External iliac vein, Common Femoral Vein, Deep Femoral Vein, Femoral Vein, Popliteal Vein.

- Acute obstruction of the Vein;
- Chronic thrombotic obstruction= Chronic Stenosis/Obstruction of the Vein;
- Non-thrombotic stenosis/compression such as May Thurner (iliac vein compression syndrome)

**Exclusion Criteria:**

- Venous Stent of the Internal Iliac (hypogastric), Great Saphenous Vein, Superior vena cava, Renal Veins, Subclavian vein, Jugular vein, Innominate vein and any upper extremity veins
- Vein Diameters that are not treatable per stent sizing recommendations
- Venous Inflow or Outflow issues precluding stent placement

GC Update: James Ebaugh, MD

- Notes from GC Meeting - April 12th 2021
- Dr. Mureebe discussed the formation of the SVS PSO’s new Diversity, Equity and Inclusion Committee
- Jim and Carrie presented the draft agenda for the VQI Annual Meeting and solicited ideas for additional programming
- Drs. Lemmon and Jorgensen presented the GC a proposal on a new PSO Trainee Scholarship Program
- Dr. Weaver provided an update on progress against strategic priorities, including an update on our collaboration with ACC
M2S Updates

Spring 2021
Regional Group Meetings
VQI Technology Updates
Revised warning COVID-19 message for Follow-up Mandatory Variable

Released on 7/29/2020

The VQI added a temporary message about the impact of COVID-19 on LTFU completion rate calculations. The following message will display when submitting a LTFU that is missing any mandatory variable:

• “IMPORTANT: The PSO understands that routine follow up visits may not be possible due to COVID-19 state mandates. Special considerations will be part of our LTFU calculation for 2020, please collect all of the required fields that are possible during this time.”

– As a reminder, the VQI allows phone and telehealth appointments to be used for LTFU when Face-to-Face visits are not feasible.
Technology Released in Q3 2020

- “Was Help Text Helpful?” feature in help text box
  - Released on 7/29/2020
  - This new feature is to provide feedback regarding the current help text. For each help text field, users will have the option to indicate if the help text provided was useful or not. This information will help the VQI to identify data fields that may be unclear to members.
  - The “Was this helpful?” vote up/down button will display in the bottom right corner of the help text box:
**Technology Released in Q4 2020**

- Across-registry revision to add Covid-19 variables and optional Patient Email
  - Released on **8/29/2020** (SUPRA, INFRA, HDA, VVR, VSR & PVI)
  - Released on **9/23/2020** (AMP, IVC, CAS, EVAR & TEVAR)
  - Added 4 procedure variables and 1 30-day and LTF follow-up variable to VQI registries to collect information about COVID-19.
  - Added an optional Patient Email variable in the procedure form to support the upcoming PRO project.
  - The procedure fields are added to the existing Procedure form tab and follow-up field to the existing 30-day and long-term Follow-up tabs. All fields are consistent across registries, and are added for all sites enrolled in the registry.
Technology Released in Q4 2020

- TEVAR Revision to align with SVS/STS guidelines
  - Released on **9/30/2020**
  - Modified fields on the TEVAR form in order to become aligned with updated SVS/STS guidelines described in the article “Society for Vascular Surgery (SVS) and Society of Thoracic Surgeons (STS) reporting standards for type B aortic dissections”.
  - The overall intent of the SVS/STS is to generate more cohesive classification guidelines for both societies to follow in order to extract more granular information which would result in better reporting and research on type b aortic dissections.
  - The definition prior to this change was Type A = Zones 0-1 and Type B = Zones 2-5. The new definition is Type A = Zone 0 and Type B = Zone 1 and beyond as shown in the image to the right.
Technology Released in Q4 2020

- TEVAR Revision to align with SVS/STS guidelines (Cont’d)
  - Procedure Form
    - Relation to Prior Dissection: The existing “Relation to Prior Dissection” field received updated help text that identifies the new dissection zones and includes a new image within the help text pop-up.
    - Entry Flow: A new “Entry Flow” field was added above False Lumen Rx.
    - Intestinal Ischemia and Unintentional Septal Rupture: Intestinal Ischemia and Unintentional Septal Rupture received additions to help text.
  - Follow-up Form
    - Entry Flow: The new “Entry Flow” field added to the Procedure was also added to the Follow-up, dependent on the Pathology field (TEVAR_PATH) being Dissection (2).
    - Current Endoleak?: The dependency for this field changed to display when Pathology is Aneurysm in addition to Pathology being Dissection or Aneurysm from dissection.
    - Intestinal Ischemia: Similar to the Procedure, this field received additional help text.
Technology Released in Q4 2020

- Varicose Vein Registry (VVR) & Venous Stent Registry (VSR) revision for New CEAP Clinical Classification
  - Released on **11/11/2020**
  - CEAP classification used for classifying venous disorders has been updated to align with the current understanding of chronic venous disease (CVD).
- New selections of C2r, C4c, and C6r were added to the current list of CEAP classifications.

<table>

Technology Released in Q4 2020

• Vascular Medicine Consult (VMC) registry revision to add new drug category and update CAD
  – Released on 11/19/2020
  – Added a new drug category called Hemorheologic Agent (categorical field) that contains Cilostazol, Pentoxifylline and Other as Hemorheologic Types. These fields were added to Demographics, Treatment and Follow-up tabs. Dosing and Dosing Other as well as Frequency and Frequency Other will be collected for both Cilostazol and Pentoxifylline.
  – The following existing Cilostazol fields are retired from the form:
    • PRETX_CILOSTAZOL
    • TX_CILOSTAZOL
    • LTF_CILOSTAZOL
  – Added a select option, CAD asymptomatic, to the Procedure field “CAD Symptoms”.

© 2017 M2S, All Rights Reserved
Projects in Progress

- VQI Patient Reported Outcome (PRO) collection for PVI
- Add opioid variables to INFRA
- Long-term follow-up reports
- HDA 2021 medium revision
- VMC 2021 small revision
- INFRA 2021 major revision
- SUPRA 2021 major revision
- OPEN 2021 major revision
Registry Projects
These projects are conducted within the SVS PSO and only non-identifiable data (removal of patient, center and physician information) will be provided to Medtronic/BARD/Cook/Gore or the FDA. Only standard of care practice is being evaluated. For such PSO activities, patient informed consent and Institutional Review Board review are not required.

Sites must follow their institutional guidelines.
TEVAR Dissection Surveillance Project is **Open for Enrollment**

- The SVS PSO is excited to announce the reopening of the TEVAR Dissection Surveillance Project to evaluate the Cook Zenith Dissection Endovascular System. FDA approval was granted for this device after safety and effectiveness were demonstrated in pre-market studies of complicated dissection with the proviso that the efficacy of TEVAR treatment of descending aortic dissection would be more fully analyzed through post-market surveillance, as was done through VQI for the W. L. Gore and Medtronic devices after their approval.

- Patients will have 30 day, and annual visits for 5 years.
- Total reimbursement of **$4,000 per patient** for a patient followed annually for 5 years.
TEVAR Dissection Surveillance Project is Open for Enrollment

- 12 of the 180 required patients enrolled (11 potential cases in process)
  - Retrospective enrollment allowed- All eligible cases from December 31, 2018 (protocol FDA approval date)
- 23 of 40 sites enrolled (10 more in contracting)
  - This project is conducted within the SVS PSO and only non-identifiable data (removal of patient, center and physician information) will be provided to Cook or the FDA. Only standard of care practice is being evaluated. For such PSO activities, patient informed consent and Institutional Review Board review are not required.

For more information, please contact: tevarproject@m2s.com
Initiated in October 2014, the TEVAR Dissection Surveillance Project Arm evaluates the W.L. Gore and Medtronic devices for treatment of Type B thoracic dissections.

- Meeting FDA requirement
  - 194 chronic and 200 acute patients with device technical success

- Currently in 5-year follow-up phase
PATHWAYS Support
**Claims Validation**

The 2019 Claims Validation process was launched in July 2020.

- 50% of Centers have completed validation or are in progress.
- Please reach out to PATHWAYS Support if you were notified and haven’t started and are unclear with the process.
- PATHWAYS Support is here to help you!

Plans to launch 2020 Claims Validation are currently underway...Stay tuned!

**PATHWAYS Educational Webinars**

- Reporting & Analytics webinar series (2 sessions) were held in November & December.
  - Visit the Resources tab in PATHWAYS to access the presentations and recordings.
- EVAR FU Aggregate Report – Excited to expand this report to additional registries in the future!
PATHWAYS Support

PATHWAYS Communication

We have heard feedback that due to firewall and spam filter configurations at your centers, you may not be receiving mass emails from M2S. We are excited to help our users keep up to date with new release announcements.

- A new “Release Notes” button has been added to the “Support” tab in the upper left corner to provide you with historical release announcements to help you search for updates.

![Image of Release Notes button and example release notes]

Selecting the Release Notes button, will open the full view of prior release announcements, notes, help text, etc.
Meeting Attendance Credit

REMEMBER TO PSO:

• **P**UT your FULL NAME in RingCentral to get credit for attendance and CME/CE credit (no exceptions will be made)

• **S**END an email to ljohnson@svspso.org with names of group members that are sharing 1 device

• **O**FFICALLY apply for CME/CE credit by clicking this link: https://dmu.co1.qualtrics.com/jfe/form/SV_cO2i6jo5jD32xcq

You only have **7 days** to complete forms for CME/CE Credit. NO EMAIL WILL BE SENT AS A REMINDER OR WITH THE CME/CE LINK
Thank you for Attending
• MAVSG Post Meeting Minutes and Meeting Evaluation Results
What did you like about this meeting?
What can we do better?
Next meeting location?

Next meeting:
Next MAVSG meeting TBD - may be in person, virtual, or a hybrid format !!!!
We usually try to our fall regional meeting in conjunction with the Midwestern Vascular Surgical Society (MVSS). It is planned to be at the Westin Chicago River North, Chicago Ill., Sept. 9-11, 2021.
MAVSG
4.14.2021

Meeting Status – virtual

Respectfully submitted by: [Cynthia A Bik]

Participation Award and CME Credit only available if attendee has signed in correctly!
See Power Point slide deck posted on VQI.org for detailed presentation

Agenda: SEE SLIDE DECK for Meeting Details

Regional Data Review – CME

[Drs. Chew and Ebaugh], MD, Regional Medical Leader, (Region Name)

Learning Objectives:

- Use the VQI regional reports to establish quality improvement goals for the vascular patients (outcomes) and for their center (process).
- Interpret and compare each centers’ VQI results to regional and national benchmarked data.
- Learn, through group discussion the VQI regional results to improve the quality of vascular health care by monitoring measurable performance indicators, SVS PSO evidence-based research, and outcomes.
- Identify high performing regional vascular centers to discuss variations in care and clinical practice patterns to improve outcomes and prompt quality improvement recommendations for vascular care patients. Sharing of best practices/pathways of care.
Regional QI Proposal - CME

None, MD,

Learning Objectives:

- Use the VQI regional reports to establish quality improvement goals for the vascular patients (outcomes) and for their center (process).
- Interpret and compare each centers’ VQI results to regional and national benchmarked data.
- Learn, through group discussion the VQI regional results to improve the quality of vascular health care by monitoring measurable performance indicators, SVS PSO evidence-based research, and outcomes.
- Identify high performing regional vascular centers to discuss variations in care and clinical practice patterns to improve outcomes and prompt quality improvement recommendations for vascular care patients. Sharing of best practices/pathways of care
Minutes cont.

National VQI Update - CME

Cheryl Jackson, SVS PSO

Learning Objectives:

Use the VQI regional reports to establish quality improvement goals for the vascular patients (outcomes) and for their center (process).

Identify high performing regional vascular centers to discuss variations in care and clinical practice patterns to improve outcomes and prompt quality improvement recommendations for vascular care patients. Sharing of best practices/pathways of care.

Regional Improvement Projects:

1. None
Minutes cont.

Action Items/Open Discussion/Next Meeting/Meeting Evaluation

Questions submitted during the meeting:

Responses from Leadership regarding questions from the Regional Mid-America meeting are listed below.

- What does “other” represent under Physician Specialty?
  - ‘Other’ is a category that captures how a physician identifies his/her specialty when not represented in the categories available. Leadership and the Clinical Team will be discussing this and drilling down to look at this further. More information to come.

- Recommend hx of family “ruptured” AAA should be captured, not just family hx of aneurysm.
  - After reviewing the data elements, the Leadership team did not find significance in capturing this additional information. Another consideration is that the patient and/or family would not know or understand what a family history of a ruptured AAA would be.

- Why is CEA Symptomatic LOS parameter 1 day? Recommend 2 days.
  - Leadership team stated this LOS parameter is based on DRG’s.
- Are ruptured aneurysms excluded from the guidelines?
  - Leadership team reviewed the guidelines and ruptured aneurysms are excluded.

- Recommend graph on sac diameter over time.
  - Leadership discussed an aggregated summary. Will discuss further but no recommendations at this time.
Sarah Lear submitted the following question with response from Pathways:

Is there a way to submit a question for the regional meeting? Our physicians and abstractors would like clarification on the hematoma complication and want to know how other sites are reporting this. The definitions sound like any hematoma should be documented, but that “some define it as larger than golf ball”. Obviously, this is a huge discrepancy between a 1cm and a golf ball.
Response to your question:

Historically we have advised users to capture as a minor hematoma if it is a visible hematoma that requires manual or mechanical assist compression for greater than 10 minutes or admission for observation would then be captured as a hematoma.

If it does not require compression or admission for observation it is not captured as minor hematoma.

Select Options and associated help text:
0 = No,
1 = Minor,
2 = Transfusion,
3 = Thrombin injection,
4 = Surgical Rx

"No = No hematoma observed during the procedure or in the observation period before discharge after the procedure (note that complications following discharge are entered on a follow-up form).

Minor = Visible hematoma (some define it as larger than golf ball) that did not require transfusion, thrombin injection, interventional or surgical treatment, but may have require manual or mechanical assist compression for greater than 10 minutes or admission for observation.

Transfusion = Required to treat blood loss associated with hematoma.

Thrombin injection = Invasive procedure in which thrombin is injected into hematoma (usually pseudoaneurysm) to promote clotting and resolution.

Interventional= Hematoma Interventional treatment with PTA tamponade, stent and/or stent graft
Surgical treatment = Open surgery required to evacuate or treat hematoma."
Meeting Evaluation Results

SVS P50 VQI REGIONAL MEETING - MID-AMERICA VASCULAR STUDY GROUP
April 14, 2021

EVALUATION SUMMARY

Please indicate the extent to which you agree with the following statements:

- The meeting was appropriate to my practice.
- This meeting will make me more effective in my practice.
- Overall, this activity was balanced and free of commercial bias.

Legend:
- Red: Strongly Agree (Yes)
- Blue: Agree
- Green: Neutral
- Light Blue: Disagree
- Yellow: Strongly Disagree (No)

Please describe any 'pearls' or takeaway messages.

- very good
- This was my first meeting and was impressed with the information covered. Look forward to future meetings.
- The region needs to continue to work on LOS metrics
- Best Zoom meeting I have ever attended
- Participants within the mid-american group. Data regaring VQI procedures.
- importance of long term followup after EVAR
- My first meeting and found it valuable.
- Better standing for where are practice is compared to other VQI sites.
- My biggest takeaway, as a data manager, is that there have been ongoing data manager meetings that I have not been receiving notifications for. I will reach out to Cynthia to make sure I am receiving the notifications, as I have always found great value in the data manager meetings in the past.
- Learned how to read the reports better
- NA
Please note any changes or improvements in your practice that you plan to make as a result of attend

- none
- I am new to this portion of the program and I am still learning.
- We will continue to monitor our LOS for improvement opportunities.
- Incorporate best practice standards
- n/a
- education to cardiologists in group about ABIs pre-PVI intervention
- will review our results and participation.
- NA
- I learned about more little details about the regional report and how to interpret it including what the asterisks mean, looking at the volumes for each module across the region and VQI. I will use this knowledge as I present to stakeholders in the future.
- As a data manager, I don't have a "practice" per se. I will note that my efforts were diverted away from quality/VQI for the majority of the past 1-1.5 yrs, so there has been a decrease in our VQI case reporting.
- NA
Please identify any barriers that you perceive in implementing these changes. Mark all that apply.
