

Project Overview		
<b>Problem Statement:</b> Our FY20 discharge (DC) medication compliance is at 79.1% across all modalities which is in the 25th percentile of all centers.		
<b>Goal:</b> Achieve a discharge medication compliance rate of 85% or higher across all modalities by the end of FY21.		
<b>Scope:</b> This goal includes patients discharged on a <u>statin</u> <b>and</b> <u>anti-platelet</u> agent for the following procedures: CEA, CAS, PVI, EVAR, TEVAR, OAAA, infra-inguinal bypass. *Excludes patients with a statin and/or anti-platelet medication contraindication *Excludes patients with death during hospitalization		
<b>Deliverable(s):</b> Compliance with discharge documentation to include any medication contraindication		
<b>Resources Required:</b> All vascular surgeons and physician assistants involved in discharging these patients will require education/training. We can consider placing a hard stop on the discharge order set to address this issue.		
Key Metrics		Milestones
<b>Outcome Metrics:</b> Increase our DC medication compliance to match the regional benchmark of 85%	<b>Milestone / Description:</b> Deep dive on reasons for non-compliance Educate surgeons/DC team on need to order/document	<b>Date (mm/yy):</b> 11/30/2020 11/15/2020
<b>Process Metrics:</b> Run monthly DC medication report to check compliance	Evaluate progress	12/31/2020
